The Standard in Data Breach Intelligence

In today's business environment, data breaches are a regular occurrence that can have major impacts on all stakeholders. However, despite the gravity, many vendors and suppliers are hesitant to disclose breach events, leaving you to conduct research on how their breach impacts your organization.

Cyber Risk Analytics® is the standard for actionable data breach intelligence, risk ratings and supply chain monitoring, granting visibility into organizations that have experienced a data breach or leaked credentials. Along with our PreBreach® Risk Ratings, organizations can get a deeper understanding of a vendor's digital hygiene and predict the likelihood of a future data breach.

THE POLARITY-CYBER RISK ANALYTICS INTEGRATION

- Get contextual information on emails with known associated breaches and search domains.
- Over 49,000 breaches tracked, representing 77 billion records lost over time.
- Predict the likelihood of a future data breach using our proprietary PreBreach Intelligence.
- Determine the risk associated with a company and take appropriate mitigating actions.

The Polarity-Cyber Risk Analytics integration enables users to get contextual information on emails with known associated breaches and search domains to see if a company has been breached. This instantaneous data awareness allows you to determine the risk associated with a company and understand the actions your team needs to take based on the breach.
