

Why RBS?

Better data, faster delivery, and accessible interfaces all make Risk Based Security your best choice for solving your cyber security challenges.

Contact us now for the power to:

- Apply “Better Data” to drive better business outcomes
- Make safer, smarter purchase decisions
- Perform better third-party due diligence
- Integrate safer products and code into your IT infrastructure
- Leverage informed reporting to prioritize risk remediation
- Better identify and manage the highest risk vendors across your value chain
- Better monitor and manage your highest risk vendors
- Gain ready access to security expertise

We Are Risk Based Security

Our mission is to provide ‘not just security, the right security’®. That means helping organizations to prioritize efforts against the threats and vulnerabilities that are most relevant or impactful to their business.

We offer the most comprehensive and timely vulnerability intelligence, breach data, and risk ratings available on the market. We provide actionable insight into the cybersecurity risks that an organization faces, including from vulnerabilities they probably don't know about.

Information Security Is In Our DNA

Established in 2011, RBS has deep roots in information security and vulnerability intelligence. Our leaders bring extensive experience in security and risk management from the financial services, insurance, and manufacturing sectors. Their direct involvement in early security industry initiatives provides the foundation for our comprehensive and practicable intelligence feeds and products, which are aligned to today's threats.

As a highly nimble and service-oriented team, we work closely with you to provide the best solution to meet your requirements, from customizing data access tools to tailored consulting. By enabling you to easily and clearly determine your areas of greatest risk, we empower you to apply resource investment according to the areas of greatest need. This risk-based approach supports one consuming goal: helping you better understand threats and prioritize actions to mitigate them through the right security approach for your organization.

Our Solutions

Risk Based Security's suite of products are the leading sources of vulnerability intelligence, breach data, and risk ratings. Our suite of products allows organizations to make truly data-driven decisions when mitigating and remediating risk by providing:

- Risk-based intelligence to drive more effective security decisions and better business outcomes
- Best-in-class vulnerability intelligence that is comprehensive, detailed, and timely
- Comprehensive and actionable breach intelligence based on five-star risk ratings and historical breach data
- Ready access to information security expertise

"The data that Risk Based Security provides enables us to lower our overall risk horizon. Risk Based Security is the most mature data gathering company in this space.

Their sources are trustworthy, and they know what we need and where to get it. I haven't had this experience with any other company in this area."

Artea Evans, Information Security Specialist at AXA XL

The Risk Based Security Platform

Transform your information security program with truly risk-based, asset-centric intelligence. The Risk Based Security Platform is the most comprehensive and timely vulnerability intelligence, breach data and risk ratings, mapped to your organizational assets, on a single pane.

With The Platform, security leaders can gain visibility into the overall security posture of their organization, including their supply chain, with advanced dashboards that draw attention to the latest vulnerability disclosures that apply to their environment and breach events impacting their supply chain.

VulnDB

VulnDB is the most comprehensive, detailed and timely source of vulnerability intelligence and third-party library monitoring. VulnDB is the source of vulnerability intelligence for the Risk Based Security Platform, tracking over 250,000 vulnerabilities across over 64,000 products – covering IT, OT, IoT, and open source libraries and dependencies.

VulnDB also contains over 80,000 vulnerabilities not found in the Common Vulnerabilities and Exposures (CVE) and National Vulnerability Database (NVD). With VulnDB's data, your team can reveal the vulnerabilities that apply to your organization, prioritize what impacts your assets and products, all while facilitating remediation.

Cyber Risk Analytics (CRA)

Transform data breach headlines into actionable intelligence with Cyber Risk Analytics (CRA). CRA is the standard for actionable data breach intelligence, risk ratings and supply chain monitoring.

CRA tracks over 50,000 global breach events and provides rich metadata on over 68 classifications such as costs, industry, geo-location mapping, and more. With this actionable breach intelligence, your organization can evaluate vendors based on five-star risk ratings and comprehensive historical breach data.

Assess and monitor the security posture of the vendors you work with using real-time supply chain monitoring, vendor product alerts, and leaked credentials.

YourCISO

Many businesses are stretched when it comes to security staff. YourCISO provides fast, efficient security expertise exactly when you need it. YourCISO provides access to expert consultants who leverage proven tools and reports to thoroughly assess your risk posture, and provides a customized approach to help mitigate whatever risks they discover.
