

Better Vulnerability Response

The ServiceNow® Vulnerability Response application is a powerful way for organizations to track, prioritize, and resolve vulnerabilities. However, depending on data from vulnerability scanning processes can add time to remediation activities and unnecessarily increase risk exposure. In addition, many of the sources of vulnerability data available for use within ServiceNow are incomplete, limiting visibility to many potentially critical issues. With the VulnDB® Vulnerability Integration for ServiceNow, organizations can access data for over 244,000 vulnerabilities catalogued by VulnDB from directly within ServiceNow, including over 79,000 vulnerabilities not found in the National Vulnerability Database (NVD / CVE).

BETTER PROCESSES POWERED BY BETTER DATA

The screenshot shows the ServiceNow interface for a vulnerability item (VIT0002306). The main view displays a modal window titled "VulnDB Related Vulnerabilities" which lists 20 vulnerabilities found in VulnDB for "Adobe Flash Player 14.0.0.179". The list includes several CVE IDs such as VulnDB-000198328, VulnDB-000199568, VulnDB-000199969, VulnDB-000199970, VulnDB-000199971, VulnDB-000199972, and VulnDB-000199973. The background interface shows the vulnerability details for the selected item, including its configuration item (Precision WorkSta), business impact (3-Non-critical), risk score (100), and priority (4-Low).

At Risk Based Security, we believe that “Better Data Matters” when it comes to helping organizations understand and mitigate the risks that could impact them. That’s why we are driven to make VulnDB the most comprehensive and timely source for vulnerability intelligence available. VulnDB revolutionizes vulnerability identification and remediation processes, arming customers with fast, current insights about the vulnerabilities associated with the technologies they use, without the need for repeated vulnerability scans.

That’s why Risk Based Security is excited about the VulnDB Vulnerability Integration app for ServiceNow. Available as a free download* from the ServiceNow Store, organizations can leverage asset information and workflow within ServiceNow to quickly identify the vulnerabilities that are relevant to their organization, prioritize them using rich vulnerability and asset criticality information, and implement strong workflows and processes to facilitate quick remediation.
